

CHANDRAYAAN-3 TO BE LAUCHED IN AUG. 2023

Relevant for: Science & Technology | Topic: Space Technology & related matters

The Chandrayaan-3 mission is expected to be launched in August 2023, S. Somnath, Chairman, ISRO, said. Dr. Somnath explained that while mission parameters would remain the same there were several changes being made to the design. "The design and engineering are significantly different [compared to Chandrayaan-2] to make it more robust and avoid the problems from last time." The Chandrayaan-3 is a follow-up of Chandrayaan-2 of July 2019, which aimed to land a rover on the lunar South Pole.
